

Direxion Daily COIN Bull 2X ETF

Overview

The [Direxion Daily COIN Bull 2X ETF](#) seeks daily investment results, before fees and expenses, of 200% of the performance of the common shares of Coinbase Global, Inc. (NASDAQ: COIN).

Investing in the funds involves a high degree of risk. Unlike traditional ETFs, or even other leveraged and/or inverse ETFs, these leveraged and/or inverse single-stock ETFs track the price of a single stock rather than an index, eliminating the benefits of diversification. Leveraged and inverse ETFs pursue daily leveraged investment objectives, which means they are riskier than alternatives which do not use leverage. They seek daily goals and should not be expected to track the underlying stock's performance over periods longer than one day. They are not suitable for all investors and should be utilized only by investors who understand leverage risk and who actively manage their investments. The Funds will lose money if the underlying stock's performance is flat, and it is possible that the Bull Fund will lose money even if the underlying stock's performance increases, and the Bear Fund will lose money even if the underlying stock's performance decreases, over a period longer than a single day. **Investing in the Funds is not equivalent to investing directly in COIN.**

Important Information Regarding CONX

The Direxion Daily COIN Bull 2X ETF (CONX) seeks 200% daily leveraged investment results and thus will have an increase of volatility relative to the underlying COIN performance itself. Longer holding periods, higher volatility of COIN and leverage increase the impact of compounding on an investor's returns. During periods of higher COIN volatility, the volatility of COIN may affect the fund's performance.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate. An investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted. Returns for performance under one year are cumulative, not annualized. For the most recent month-end performance please visit the funds' website at direxion.com. Short-term performance, in particular, is not a good indication of a fund's future performance, and an investment should not be made based solely on returns. Because of ongoing market volatility, fund performance may be subject to substantial short-term changes. For additional information, see the fund's prospectus.

Shares of the Direxion Shares are bought and sold at market price (not NAV) and are not individually redeemed from a Fund. Market Price returns are based upon the midpoint of the bid/ask spread at 4:00 pm EST (when NAV is normally calculated) and do not represent the returns you would receive if you traded shares at other times. Brokerage commissions will reduce returns. Fund returns assume that dividends and capital gains distributions have been reinvested in the Fund at NAV. Some performance results reflect expense reimbursements or recoupments and fee waivers in effect during certain periods shown. Absent these reimbursements or recoupments and fee waivers, results would have been less favorable.

Direxion Shares Risks – An investment in a Fund involves risk, including the possible loss of principal. Each Fund is non-diversified and includes risks associated with a Fund concentrating its investments in a particular security, industry, sector, or geographic region which can result in increased volatility. A Fund's investments in derivatives such as futures contracts and swaps may pose risks in addition to, and greater than, those associated with directly investing in securities or other investments, including imperfect correlations with underlying investments or the Fund's other portfolio holdings, higher price volatility and lack of availability. As a result, the value of an investment in a Fund may change quickly and without warning.

Leverage Risk – The Bull Fund obtains investment exposure in excess of its net assets by utilizing leverage and may lose more money in market conditions that are adverse to its investment objective than a fund that does not utilize leverage. A total loss may occur in a single day. Leverage will also have the effect of magnifying any differences in the Fund's correlation with COIN and may increase the volatility of the Bull Fund.

Daily Correlation Risk - A number of factors may affect the Bull Fund's ability to achieve a high degree of correlation with COIN and therefore achieve its daily leveraged investment objective. The Bull Fund's exposure to COIN is impacted by COIN's movement. Because of this, it is unlikely that the Bull Fund will be perfectly exposed to COIN at the end of each day. The possibility of the Bull Fund being materially over- or under-exposed to COIN increases on days when COIN is volatile near the close of the trading day.

Coinbase Global, Inc. Investing Risk — COIN faces risks associated with: significant fluctuations in operating results; revenue dependencies on the price of crypto assets and volume of transactions on its platform; revenues may be concentrated on a limited number of crypto assets; overall demand for crypto assets; interest rate fluctuations; possible limitations on the development and growth of crypto assets, among other risks.

Financials Sector Risk — Performance of companies in the financials sector may be materially impacted by many factors, including but not limited to, government regulations, economic conditions, credit rating downgrades, changes in interest rates and decreased liquidity in credit markets.

Crypto Industry Investing Risk — Companies in the crypto industry are subject to various risks, including the inability to develop digital asset applications or to capitalize on those applications, theft, loss, or destruction of cryptographic keys, the possibility that digital asset technologies may never be fully implemented, cybersecurity risk, conflicting intellectual property claims, and inconsistent and changing regulations.

Additional risks of the Fund include Effects of Compounding and Market Volatility Risk, Market Risk, Counterparty Risk, Rebalancing Risk, Intra-Day Investment Risk, Other Investment Companies (including ETFs) Risk, Cash Transaction Risk, and Passive Investment and Index Performance Risk. Please see the summary and full prospectuses for a more complete description of these and other risks of the Fund.
