**FOR INFORMATION: 866-476-7523 | [INFO@DIREXION.COM](mailto:INFO@DIREXION.COM) | [DIREXION.COM](http://DIREXION.COM)**

\* Unlike traditional ETFs, or even other leveraged or inverse ETFs, these leveraged or inverse single-stock ETFs track the price of a single stock rather than an index, eliminating the benefits of diversification and substantially increasing risk.

***An investor should carefully consider a Fund's investment objective, risks, charges, and expenses before investing. A Fund's prospectus and summary prospectus contain this and other information about the Direxion Shares. To obtain a Fund's prospectus and summary prospectus call 866-476-7523 or visit our website at [direxion.com](http://direxion.com). A Fund's prospectus and summary prospectus should be read carefully before investing.***

There is no guarantee that the ETFs will achieve their investment objectives. Direxion's Leveraged and Inverse ETFs are not suitable for all investors and should be utilized only by sophisticated investors who understand leverage risk, consequences of seeking daily leveraged investment results and intend to actively monitor and manage their investments. Investing in the ETFs may be more volatile than investing in broadly diversified funds. The use of leverage by an ETF means the ETFs are riskier than alternatives which do not use leverage.

**Direxion Shares ETF Risks** – An investment in the ETFs involves risk, including the possible loss of principal. The ETFs are non-diversified and include risks associated with concentration that results from an ETF's investments in a particular industry, sector or company, which can increase volatility. The leveraged and inverse ETF utilize derivatives, such as futures contracts and swaps which are subject to market risks that may cause their price to fluctuate over time. The leveraged and inverse ETFs do not attempt to, and should not be expected to, provide returns which are a multiple of the return of their respective index or underlying security for periods other than a single day. The leveraged and inverse ETFs may also be subject to leverage, correlation, daily compounding, market volatility and risks specific to an industry or sector.

The non-leveraged ETFs are subject to certain risks, including imperfect index correlation and market price variance, which may decrease performance. The non-leveraged ETFs may invest in a relatively small number of issuers and, as a result, be subject to greater risk of loss with respect to its portfolio securities. The non-leveraged ETFs may experience greater fluctuation in its net asset value as compared to other investments. The non-leveraged ETFs may be appropriate for investors with a long-term investment time horizon, who primarily seek capital growth, and who are able to tolerate periods of prolonged price declines. Please read each ETF's prospectus for a more complete description of the investment risks. There is no guarantee that an ETF will achieve its investment objective.
